## PROFESSIONAL SUMMARY

SDET with 4+ years across payments, banking, and healthcare platforms. Builds Python services and REST APIs alongside the Pytest, Selenium, and PySpark suites that prove them out, and brings agentic AI and LLM tooling into enterprise quality engineering.

## WORK EXPERIENCE

### CVS Health | Senior SDET

Mar 2025 – Present

- Design and deploy 4 Python backend services and REST APIs (FastAPI) behind the enterprise reconciliation platform, from design review to release.
- Lead the ground-up rebuild of the reconciliation framework, replacing a manual audit with FastAPI microservices and compressing cycle time from 4 days to 22 hours.
- Engineer SQL-backed workflows across Databricks and relational stores, with PySpark logic that checks 53M records against source-of-truth systems.
- Introduce agentic AI and LLM tooling into live engineering systems, building agent workflows that triage mismatches and trim manual investigation 24%.
- Mentor engineers on Pytest and Playwright across negative, boundary, and edge cases, lifting regression coverage to 68%.
- Embed both suites in CI/CD and partner with product teams to clear tickets in Jira and Rally under a 3-day SLA, reducing recurring defects 18%.
- Present release-readiness metrics to leadership, giving stakeholders one trusted view of platform health.

### Citi | Software Engineer in Test

Sep 2024 – Mar 2025

- Spearheaded Selenium WebDriver, TestNG, and JUnit frameworks across 4 enterprise applications, raising coverage from 43% to 56%.
- Authored the Page Object Model design and a reusable utility library, then rolled the standards out team-wide, trimming maintenance effort 37%.
- Wired REST Assured API checks into Jenkins pipelines with release engineering, dropping deployment failures 14%.

### Unison Consulting | Software Engineer

Mar 2024 – Jul 2024

- Diagnosed API contract and consistency failures across Python and Spring Boot services, pairing with backend developers to harden reliability.
- Ran database-level testing on PostgreSQL and MongoDB, closing gaps that surfaced only at production-scale volumes.
- Tuned Jenkins CI/CD pipelines and gated merges on green builds, lowering post-release defects 25%.

### Mastercard | Software Engineer

Sep 2023 – Mar 2024

- Automated data-integrity checks in Python and Pandas that cleared 40M transactional records before downstream ingestion.
- Instrumented AWS CloudWatch and centralized logging, then briefed on-call engineers on the new signals, replacing hours of log-diving with one dashboard.

### Rocket Mortgage | Software Quality Assurance Engineer Intern

May 2022 – Dec 2022

- Developed Selenium and TestNG suites with TDD for the consumer-facing website and confirmed API integrity through Postman.
- Root-caused stability issues in Firebase Crashlytics, resolving crashes ahead of release sign-off.
- Delivered an upcoming-listings feature that raised user interaction 17%, coordinating with product and QA through launch.

### Paytm, India | QA Engineer

Sep 2020 – Aug 2021

- Owned backend quality for UPI, wallet, and EMI integrations, exercising APIs across high-volume payment flows.

## SKILLS

**Languages:** Python, Java, SQL

**Test Automation:** Pytest, Selenium WebDriver, Playwright, TestNG, JUnit, REST Assured, Postman, Cucumber, POM, BDD

**Backend & APIs:** FastAPI, Spring Boot, REST APIs, Microservices, JSON

**AI & Data:** Agentic AI workflows, LLM-based automation, PySpark, Pandas, Databricks, ETL/data pipeline validation

**Databases:** PostgreSQL, MySQL, Oracle, MongoDB

**CI/CD & Cloud:** Jenkins, GitLab CI, GitHub Actions, Docker, Git, GitHub, AWS (CloudWatch)

**Methodologies:** Regression, Integration, API, Performance, Boundary, Negative, Edge-Case, Agile/Scrum, SDLC, Jira, Rally

## EDUCATION

Master of Science in Computer Science

| Wayne State University, Michigan |

GPA: 3.8

Aug 2021 – May 2023
