PROFESSIONAL SUMMARY

SDET with 4+ years across payments, banking, and healthcare data platforms, building Python backend services and REST APIs alongside the pytest, Selenium, and PySpark automation that validates them, and integrating agentic AI and LLM-based tooling into production quality systems.

WORK EXPERIENCE

CVS Health | Senior SDET

Mar 2025 – Present

- Build and maintain Python backend services and REST APIs (FastAPI) powering the enterprise data reconciliation platform, owning 4 services from design through production deployment.
- Engineer SQL-backed data workflows across Databricks and relational stores, implementing Python and PySpark reconciliation logic that validates 53M records against source-of-truth backends.
- Integrate agentic AI and LLM-based automation into production engineering systems, building agent workflows that triage data mismatches and cut manual investigation time 24%.
- Architected the reconciliation framework from scratch, replacing a manual audit process with FastAPI microservices that reduced audit cycle time from 4 days to 22 hours.
- Own pytest and Playwright automation across negative, boundary, and edge-case scenarios, lifting regression coverage to 68% and embedding both suites in CI/CD.
- Drive production defect resolution in Jira and Rally, enforcing a 3-day SLA that cut recurring defects 18%.

Citi | Software Engineer in Test

Sep 2024 – Mar 2025

- Architected Selenium WebDriver, TestNG, and JUnit automation frameworks across 7 enterprise applications, raising test coverage from 43% to 56%.
- Built the Page Object Model (POM) design and reusable test utility library, setting team-wide standards that cut test maintenance effort 37%.
- Embedded Selenium and REST Assured API automation into Jenkins pipelines, cutting deployment failures by 14%.

Unison Consulting | Software Engineer

Mar 2024 – Jul 2024

- Resolved API validation and data consistency defects across Python and Spring Boot services, hardening backend reliability.
- Executed database-level testing on PostgreSQL and MongoDB and hardened Jenkins CI/CD pipelines, cutting post-release defects 25%.

Mastercard | Software Engineer

Sep 2023 – Mar 2024

- Built automated data validation scripts in Python and Pandas that verified 40M transactional records before downstream ingestion.
- Instrumented AWS CloudWatch and centralized logging to diagnose production issues and accelerate fixes.

Rocket Mortgage | Software Quality Assurance Engineer Intern

May 2022 – Dec 2022

- Built Selenium and TestNG suites using TDD for the consumer-facing website, validated REST API integrity via Postman, and resolved stability issues through Firebase Crashlytics root-cause analysis.
- Shipped an upcoming-listings feature that lifted user interaction 17%, owning development through QA validation and release sign-off.

Paytm, India | QA Engineer

Sep 2020 – Aug 2021

- Owned backend quality for UPI, wallet, and EMI payment integrations, validating APIs and running functional and regression testing with Postman and PostgreSQL across high-volume payment workflows.

SKILLS

Languages: Python, Java, SQL

Test Automation: Pytest, Selenium WebDriver, Playwright, TestNG, JUnit, REST Assured, Postman, Cucumber, POM, BDD

Backend & APIs: FastAPI, Spring Boot, REST APIs, Microservices, JSON

AI & Data: Agentic AI workflows, LLM-based automation, PySpark, Pandas, Databricks, ETL/data pipeline validation

Databases: PostgreSQL, MySQL, Oracle, MongoDB

CI/CD & Cloud: Jenkins, GitLab CI, GitHub Actions, Docker, Git, GitHub, AWS (CloudWatch)

Methodologies: Regression, Integration, API, Performance, Boundary, Negative, Edge-Case, Agile/Scrum, SDLC, Jira, Rally

EDUCATION

Master of Science in Computer Science | Wayne State University, Michigan | GPA: 3.8

May 2023

Bachelor of Technology in Information Technology | KNIT, Sultanpur | GPA: 3.75

May 2019
